

PAPER EOB LITE

Key Benefits

- Maximize data accuracy and validation, minimizing denied claims
- Reduce operational costs
- Expedite posting to your billing or practice management system
- Accelerate exceptions and denials management
- Access to a ten-year HIPAA compliant archive for search, retrieval and download

Payment automation for small to mid-size providers to facilitate faster posting

All providers receive a certain percentage of remittances on paper due to the inability of payers to provide electronic remittances back to the provider. This results in providers being faced with the challenge of efficiently managing both electronic and paper payments to optimize the revenue cycle.

Paper-based processes result in long Days Sales Outstanding, delays in working denials and exceptions; plus, presents the issue of paper storage.

Now a provider can automate the paper EOB process. Upon scanning payments and EOBs, EOB Lite will electronically convert EOBs to an ANSI 835 and place it on the MediStreams HIPAA compliant web portal for pickup by the provider.

In addition, all original EOB images, standardized EOB views and data is available for research for ten years.
